Middle of Nowhere

When moving from West Texas to the bustling metropolitan life, I found it really hard to change the style that I grew up around. There wasn't really an easy way for me to intertwine the fashions of the country and the city. This inspired me to create a collection that combined two very different lives to make one I am proud of and would love to have seen back then.

I want to use a combination of seemingly opposite fabrics and textures to create cohesive looks that match the merging of the city and the West. My collection aims to pinpoint young adult women who want to find their most personal and unique styles. I want versatility to show through in my pieces. I want to showcase what I have learned and create looks I'm proud of that still convey my message and combine each identity in their own ways. I want ruggedness and sophistication to collide into a creative and collaborative mix.
